

Docker Orchestration

VS

Docker swarm

kubernetes

What is Minion?

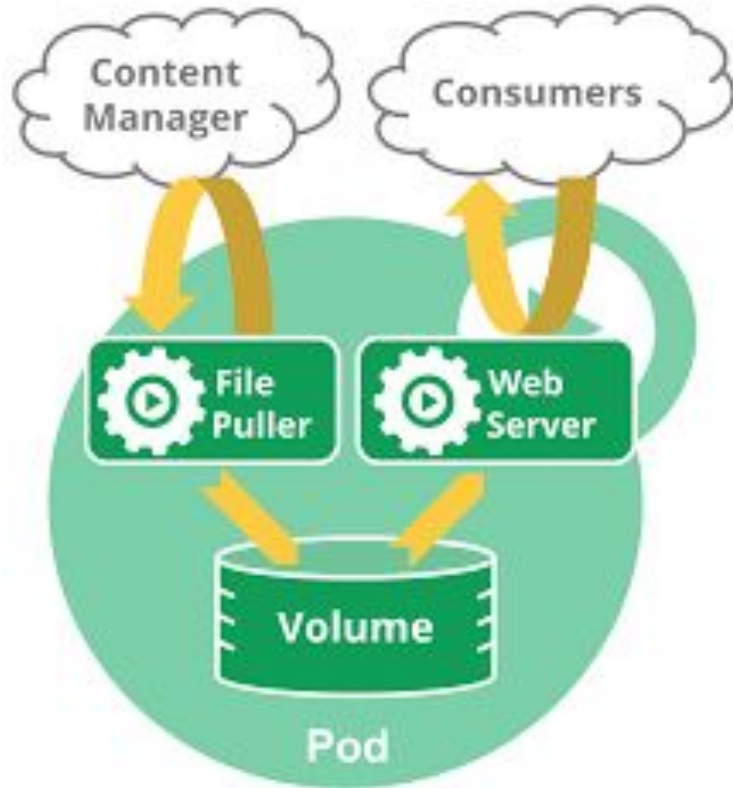

Basically is the ***Host***.
Where will be all the
containers.

Kubectl?????

Kubectl is a command line utility that connects to the API server.

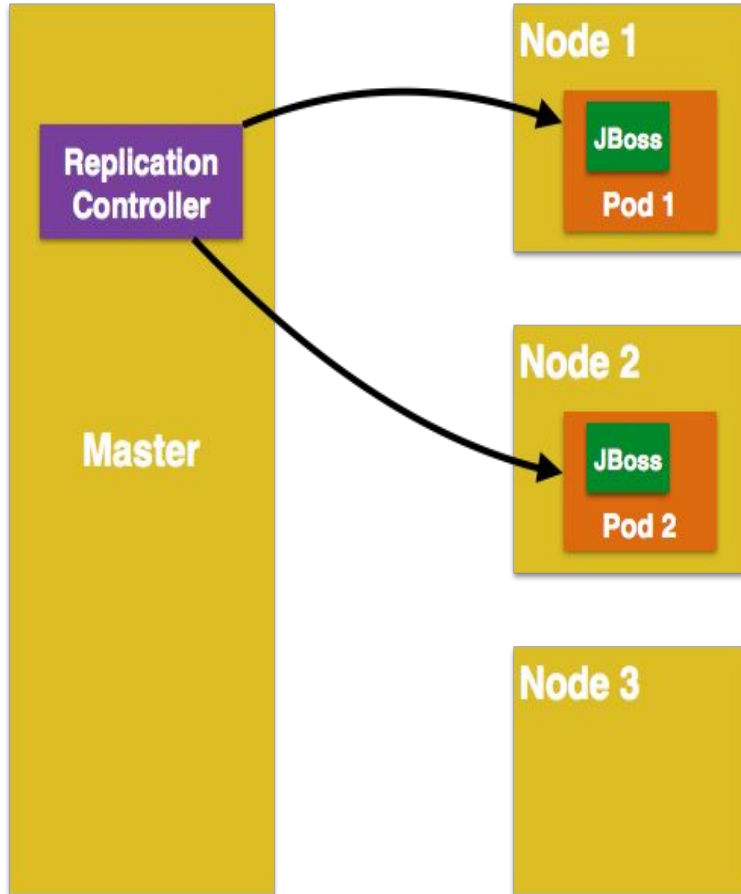

Pod?

Smaller unit of service of the kubernetes, it will only be annotations and variables that you have created.

Pod is a container also.

Replication controller

It is the controller, which defines which container to use when my container dies

Namespaces

Namespace A

Namespace B

Namespace C
